                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 52, Application US/09083235A

Sequence 52, Application US/09083235A

Patent No. 6632919

GENERAL INFORMATION:
APPLICANT: Nielsen, Peter E
APPLICANT: Bldrup, Anne B
TITLE OF INVENTION: Peptide Nucleic Acid Monomers and Oligomers
FILE REFERENCE: 1583044

CURRENT APPLICATION NUMBER: US/09/083,235A

CURRENT PILING DATE: 1997-05-23

PRIOR PILING DATE: 1997-05-33

NUMBER: OF SEQ ID NOS: 87

SOFTWARE: PatentIn Ver: 2.1

SEQ ID NO 52

LENGTH: 10

Sequence 49, Application US/08847108
Sequence 49, Application US/08847108
Patent No. 5736336
TITLE OF INVENTION: Binding Affinity, Sequence Specificity
TITLE OF INVENTION: Binding Affinity, Sequence Specificity
Patent No. 5736336
TITLE OF INVENTION: And Solubility
NUMBER OF SEQUENCES: 53
CORRESPONDENCES: 53
CORRESPONDENCE ADDRESS:
ADDRESSE: Woodcock Washburn Kurtz Mackiewicz & No. 5736336ris LLP
STREET: One Liberty Place - 46th Floor
CITY: Philadelphia
                              APPLICANT: Buchardt et al.
TITLE OF INVENTION: Peptide Nucleic Acids Having Amino Acid
TITLE OF INVENTION: Side Chains
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
ADDRESSE: Woodcock Washburn Kurtz Mackiewicz & No. 5719262ris LLP
STREET: One Liberty Place - 46th Floor

US-08-686-116A-49

Sequence A application US/08686116A

Patent No. 5/14331

GENERAL INFORMATION:

PAPLICANT: Buchardt et al.

TITLE OF INVENTION: Binding Affinity, Sequence Specificity

TITLE OF INVENTION: ans Solubility

NUMBER OF SEQUENCES: 53

CORRESONDENCE ADDRESS:

ADDRESSER: WoodCock Washburn Kurtz Mackiewicz & No. 5714331ris illy

Sequence 4, Application US/08808474A

Sequence 4, Application US/08808474A

Patent No. 5856103

GENERAL INFORMATION:
APPLICANT: Gray, Donald M.
APPLICANT: Gray, Donald M.
TILLE OF INVENTION: METHOD FOR SELECTIVELY RANKING SEQUENCES
TITLE OF INVENTION: FOR ANTISENSE TRRGETING
TITLE OF INVENTION: FOR ANTISENSE TRRGETING
CORRESPONDENCE ADDRESS:
ADDRESSEE: Locke Purnell Rain Harrell
STREET: 2200 Ross Avenue, Suite 2200
CITY: Dallas
STATE: Texas
COUNTRY: USA
COUNTRY: USA
COMPUTER READBRIE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: EMADRIES: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATE:
APPLICATION NUMBER: US/08/808,474A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

DESCRIPTION: third strand derived from esterase D
DESCRIPTION: sequence region in Seq ID No. 586124471
HYPOTHETICAL: Yes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 72, Application US/08173489C
Patent No. 5861244
GENERAL INFORMATION:
APPLICANT: WANG, C. -G.
APPLICANT: HEPBURN, A. G.
TITLE OF INVENTION: GENETIC SEQUENCE ASSAY USING DNA TITLE OF INVENTION: TRIPLE-STRAND FORMATION.
NUMBER OF SEQUENCES: 365
CORRESPONDENCE ADDRESS:
     ORGANISM: Homo sapiens
POSITION IN GENOME:
CHROMOSOME/SEGMENT: chromosome 13
MAP POSITION: 13q14.1-q14.2
PUBLICATION INFORMATION:
AUTHORS: Lee, E Y H P, Lee, W H.
TITLE: Molecular cloning of the
TITLE: human esterase D gene, a genetic marker of
TITLE: retinoblastoma
                                                                                                                                                                                                                                                                                                                 DATE: 1986

Sequence 45, Application US/08618834C

Sequence 45, Application US/08618834C

Patent No. 6361937

GENERAL INFORMATION:

APPLICANT: Stryer, Lubert

TITLE OF INVENTION: Computer-Aided Nucleic Acid

TITLE OF INVENTION: Sequencing

NUMBER OF SEQUENCES: 54

CORRESPONDENCE ADDRESS:

ADDRESSEE: Ritter, Van Pelt & Yi LLP

STREET: 4906 El Camino Real, Suite 205

CITY: Los Altos

STATE: CA

Patent No. 6531305
GENERAL INFORMATION
Sequence 53, Application US/09394455
Patent No. 6531305
GENERAL INFORMATION
APPLICANT: Witman, George F.
APPLICANT: San Agustin, Jovenal
APPLICANT: Bas YK, John D.
TITLE OF INVENTION: SPERM ASSOCIATED PROTEIN KINASE POLYPEPTIDES, CORRESPONDING
TITLE OF INVENTION: NUCLEIC ACIDS, AND METHODS OF USE
FILE REPERENCE: 07917/078001
CURRENT APPLICATION NUMBER: US 60/09/394,455
CURRENT APPLICATION NUMBER: US 60/099,771
PRIOR PLILING DATE: 1999-09-10
NUMBER OF SEQ ID NOS: 56
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..

RESULT 234

US-10-42-111-43/C

1 Sequence 43, Application US/10042111

1 Patent No. 6551476

2 GBNERAL INFORMATION:

APPLICANT: ZHEJIANG ACADEMY OF AGRICULTURAL SCIENCES

APPLICANT: CHEN, JINGING

1 TITLE OF INVENTION: A METHOD FOR CONTROLLING RATIO OF PROTEINS/LIPIDS IN CROP SEEDS

1 TITLE OF INVENTION: A METHOD FOR CONTROLLING RATIO OF PROTEINS/LIPIDS IN CROP SEEDS

1 FILE REFERENCE: ref.

1 CURRENT APPLICATION NUMBER: US/10/042,111

2 CURRENT APPLICATION NUMBER: CM 99124511.3

PRIOR FILING DATE: 1999-11-09

3 NUMBER OF SEQ ID NOS: 46

3 SOFTWARE: Patentin version 3.1

3 SEQ ID NO 43

1 LENGTH: 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TYPE: DNA ORGANISM: Artificial Sequence PEATURE: PATURE: OPTHER INFORMATION: Used to demonstrate how indicated aspect of invention works. TITLE OF INVENTION: Containing Nucleotide Mismatches and the Location of These
TITLE OF INVENTION: Containing Nucleotide Mismatches and the Base
TITLE OF INVENTION: Substitutions or Deletions in Nucleotide Sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-08-605-163-18/c

Sequence 18, Application US/08605163

Patent No. 5879886

GENERAL INFORMATION:

APPLICANT: Meo, Tommaso

APPLICANT: Verpy, Elisabeth

APPLICANT: Verpy, Elisabeth

APPLICANT: Biscotto, Michel

TILE OF INVENTION: Method for Detecting Molecules

TITLE OF INVENTION: Containing Nucleotide Mismatches and the Location of These
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          29.1%; Score 6.4; DB 1; Length 9; 87.5%; Pred. SOFTWARE: Patentin Release #1.0, Version #1.30 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: PCT/US95/04477
FILING DATE:
CLASSIFICATION:
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 08/228,935
FILING DATE: 14-APR-1994
INFORMATION POR SEQ ID NO: 28:
SEQUENCE CHARACTERISTICS:
LENGTH: 9 base pairs
TYPE: nucleic acid
TYPE: nucleic acid
TYPE: nucleic acid
TOPOLIGY: linear
MOLECULE TYPE: other nucleic acid
DESCRIPTION: /desc = "OTHER NUCLEIC ACID,
CORRECTION: /desc = "OTHER NUCLEIC ACID,
CORRECTION: /desc = "OTHER NUCLEIC ACID,
CORRECTION: SYNTHETIC DNA"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
